Depression

Insomnia

Price \$ 349.00

Relieve your patients' symptoms, quickly and safely with the Cranial Stimulation System

- The Brain functions electrochemically and can be readily modified by electrical intervention.
- The CES Unit improves emotional and psychological states.
- Treatments are cumulative: however, most patients show at least some improvement after the first treatment.
- Safe, with no serious adverse events reported in over 30years of clinical use.
- Used as a first-line therapy or as an adjunct to pharmacotherapy with no polypharmacy effects.

DISCOVERYHEALTH
SOLUTIONS

Dr. Klinghardt Recommends the Cranial Stimulation Unit to his patients for

“Electro Sleep” or “Electro Mind Balance” and “Cognitive Improvement”

Klinghardt Academy Pricing: \$349.00

The Non-Drug Alternative for Treatment for Insomnia, Jet Lag, Depression and Anxiety with a therapeutic use of battery powered current. Easy to use and operate, compact and portable. Safe, non-invasive and non-addictive with minimal sensation or side effects.

Stimulation is applied through electrode pads or conductive rubber ear clips, placed between the ears and the jaw, or on the ear lobes. Other uses are also recommended by your health care provider.

Initial day of use

- It gives a pleasant tingling sensation
- Gradual relaxation
- First two - three days:
- Normalization of sleep patterns
- Decreased nervous energy and frenetic behavior
- Faster onset of sleep on going to bed
- Feeling of being rested on waking in the morning
- elevation of mood
- Fewer and shorter periods of waking at night

Week One:

- Diminished depression and mood swings
- Fewer episodes of irrational anger and irritability
- Improved Impulse control
- Greater sense of Balance, centeredness, and calm
- A pleasant, detached state and quieting of the mind

Week Two and Three

- Diminished mental confusion
- Heightened clarity and alertness
- Improved task concentration
- Normalized information recall
- Heightened ability to focus
- Increased mental energy
- Accelerated learning

The efficacy and safety of the therapy can be attested to by approximately 1,000 articles, many of which are listed in four reviews put out by the Foreign Service Bulletin of the United States Library of Congress. There is additionally a wealth of physiological and bio-engineering data on electro-sleep and electro-anesthesia, including 18 experimental animal studies. Human research studies on the effectiveness confirm through 28 established psychometric tests, computerized EEG's and topographical brain-mapping, Meta-analyses yielding positive results from the use of Cranial Stimulation have been conducted at the University of Tulsa and at the Harvard University School of Public Health. An international treatment modality for more than 50 years, developed in the Soviet Union as thousands of people worldwide continue to receive its benefits.
