

## 20 reports on use of the drug PARA-RIZOL at the practice of Dr. Martina Klein, specialist in internal medicine, Kulmbach, Germany.

Start of registration by Dr.G.Steidl: April 14, 1999.

Treatment period: approx. January 1, 1998 to May 18, 1999.

All diagnoses, prescriptions, results and other observations are documented in patient's files as usual. They are confidential. The following data are released for scientific purposes and to provide evidence that PARA-RIZOL is effective and safe if used correctly. Dosage must begin cautiously, 1 drop in cold water 3 times daily 1 hour before meals, increasing day by day up to 10 drops approx. 3 times. Tolerance must be tested. Overdose may lead to a flood of toxins from destroyed bacteria, fungi and parasites resulting in blisters and vesicles breaking out on the skin of the hands, arms and the feet, accompanied by severe pruritus.

Diagnoses, results and conclusions from classic laboratory analysis are in full accordance with the bioresonance method used. The results of the treatment do not require further comment as they speak for themselves. They are the result of combining the prescribed components.

Formula for PARA-RIZOL, 50 g:       35 g RIZOL raw material.  
  5 g clove oil.  
  5 g absinthium (wormwood) oil.  
  5 g walnut oil.

RIZOL raw material consists 80 % of long chain ozonide from olive oil and castor oil, dissolved in excess olive oil and castor oil. This formula may be produced in any pharmacy on prescription.

The Karl and Veronica Carstens Foundation supports research into the properties and medicinal applications of ozonides as they occur in Rizol raw material. A test of the mutagenic properties of this raw material according to OECD guidelines (mouse lymphoma cells) gave the result: not mutagenic. A test of mitochondrial activity revealed no decrease. The edition of medicinal herbs enhances and extends the desired effects on bacteria, fungi and parasites.

### Case studies

Case 1:

Name: I.D. from K., age 37, fem.

Diagnosis: Serious iron deficiency, all treatment unsuccessful. Continued worsening over 2-3 years despite

iron substitution. (Her uncle heads a hospital department). Feels miserable.

Readings before treatment: Ferritin: 5-7 norm: 20-200

IgE: > 300 norm: < 100

stool: amoebia positive.

Therapy: Began with Metronidazole, with no effect. Then Rizol-Neu with minimal effect. Then PARA-RIZOL, 2 courses of treatment each over 8 weeks with 4 weeks' break. Iron substitution continued.

Condition after treatment: Counts in normal range. After 3 months iron level constant and remained so for

over 6 months even when all drugs were stopped.

Remark: This progress was observed by haematologists with great amazement and surprise. PARA-RIZOL

is not yet known in conventional medicine.

Case 2:

Name: H.H. from K., age 60, fem.

Diagnosis: Tired, anemia but no iron anemia.

Blood count: Er 1996: 3.2 norm: > 4 million/ml

Er 1997: 2.2

Er 1998: 1.9

eosinophiles: 8 norm: < 7

Therapy: Folic acid, B12, iron with no significant effect. Then 6 week course of PARA-RIZOL.

Dosage

increasing to 10 drops up to 3 times daily in cold water before meals.

Condition after treatment: Er: 4.4. Other counts normalized. After 6 weeks state of good health.

---

Case 3:

Name: A.S. from K., age 24, m.

Diagnosis: Tired, 1997 increased liver counts.  
alkalic phosph: 455 norm ca. 171  
eosinophiles: 12 norm < 7  
Bile duct blocked. Liver fluke found.

Therapy: To begin with Legalon, but little improvement. Then 4 week course of PARA-RIZOL,  
increasing to 10 drops up to 3 times daily in cold water before meals.

Condition after treatment: Alkalic phosph. 176. Liver counts normalizing. Patient was now able to be independent, feels good.

---

Case 4:

Name: H.L. from M., age 47, fem.

Diagnosis: Tired, increased liver counts since 1994, liver fluke found by bioresonance.  
Alkal. Phosph: 202 norm ca. 171  
gamma-GT: 78

Therapy: 4 week course of PARA-RIZOL, increasing to 10 drops up to 3 times daily in cold water before meals.

Condition after treatment: Liver counts normalized. Patient feels well.

---

Case 5:

Name: E.P. from K., age 80, fem.

Diagnosis: Severe chronic diarrhoea. Ascarides positive, proteus high.

Therapy: 4 week course of PARA-RIZOL, increasing to 10 drops up to 3 times daily in cold water before meals .

Condition after treatment: Counts normalized. Diarrhoea disappeared, patient feels well.

---

Case 6:

Name: C.K. from K., age 6, m., lives on farm.

Diagnosis: Hyperactivity syndrome. Nightmares, complex about being stalked(two black men want to take me away)

Diagnosis: Neurotransmitter disorder. Positive test for intestinal flukes, pinworms, Candida.

Therapy: Ritalin refused by parents. 4 week course of PARA-RIZOL, increasing to 10 drops up to 3 times daily in cold water before meals .

Condition after treatment: Neurotransmitter normalized. Other disorders vanished, nightmares vanished, marked change in behaviour .Restlessness vanished, behaviour is gentle, patient feels well.

---

Case 7:

Name: S.B. from K., age 10, m.

Diagnosis: Hyperactivity syndrome. Eczema on both arms, anal eczema. Candida found, disorder of intestinal flora, no E.-coli.

Therapy: Ritalin refused by parents. 3 week course of PARA-RIZOL, increasing to 10 drops up to 3 times daily in cold water before meals, . (Eczema not treated externally).

Condition after treatment: Eczema disappeared, patient feels well, become calmer, is able to concentrate again, appetite regained, eats three times as much. Parents say he is a different child.

---

Case 8:

Name: R.K. from K., age 57, m.

Diagnosis: Very tired, exhausted, metabolic syndrome, reactions slowed down considerably, working and thinking sluggish, even impeded. Liver flukes positive with bioresonance.  
Diabetes, triglycerides high, blood pressure high, liver counts high.

Alkal. Phosph. 191, gamma-GT. > 100. Blood sedimentation 47 / 20.

Therapy: 3 month course of PARA-RIZOL, increasing to 10 drops up to 3 times daily in cold water before meals .

Condition after treatment: Liver counts improved. Alkal. Phosph. 171, gamma-GT 73.  
Behaves like a different person, reactions normalized, state of health clearly improved.

---

Case 9:

Name: K.H. from K., age 70, fem.

Diagnosis: Rheumatism for years, primary chronic polyarthritis. 6 months before consultation eczema all

over the body, also in the eyes accompanied by pruritus which has become unbearable. She owns

a dog. 7 kinds of parasites found with bioresonance. Abnormal blood counts.

Therapy: 4 week course of PARA-RIZOL, increasing to 10 drops up to 3 times daily in cold water before

meals, then break, then 4 weeks PARA-RIZOL again.

Condition after treatment: Blood counts improved. Eczema and pruritus vanished, wellbeing clearly improved. Flukes disappeared first, after 4 weeks treatment with PARA-RIZOL only 2 kinds of parasites were detectable.

---

Case 10:

Name: L.E. from K., age 80, m.

Diagnosis: Severe asthma, aortic aneurysm, persistent dry cough with severe strain on the heart causing

gasping for air. Almost given up on by doctors, was looking for a nursing home. He owns a dog.

Test for parasites was positive.

Therapy: 4 week course of PARA-RIZOL, increasing to 10 drops up to 3 times daily in cold water before

meals .High doses of vit. C, B, E. Dog wormed

Condition after treatment: Cough vanished,  
excellent state of health, patient is able to take care of himself again.

---

Case 11:

Name: R.S. from K., age 74, fem.

Diagnosis: Disturbed sleep, depression. Many sleeping pills failed. Pinworm found with bioresonance. Neurotransmitter disorder.

Therapy: 2 week course of PARA-RIZOL increasing to 10 drops up to 3 times daily in cold water before

meals. Then L-tryptophane, stopped after 3 days due to intolerance. 3 days' break, then only 1/4

tablet of L-tryptophane 3 times weekly. PARA-RIZOL 5 weeks in total.

Condition after treatment: Blood counts improved. Patient sleeps normally, no longer needs sleeping pills.

---

Case 12:

Name: G.B. from K., age 45, fem.

Diagnosis: Chronique fatigue syndrome since 1995, depression.  
Bioresonance: candida, parasites, geopathic stress.

Therapy: 8 week course of PARA-RIZOL, increasing to 10 drops up to 3 times daily in cold water before

meals .

Condition after treatment: Blood counts improved. Feels like a different person, cannot believe it herself, body feels different, positive mood, fatigue vanished.

---

Case 13:

Name: J.F. from K., age 34, fem.

Diagnosis: During first pregnancy HELLP syndrome, tired, depressive. After pregnancy Crohn's disease,  
headaches, perception disorder. Diagnosis from elsewhere: MS.  
Bioresonance: parasites positive.  
Blood counts abnormal, thrombocytes reduced, autoimmune activities observed.

Therapy: Course of PARA-RIZOL from Oct. 98 to Dec. 98, increasing to 10 drops up to 3 times daily  
in  
cold water before meals . Additional acupuncture.

Condition after treatment: Feels better as weeks progress, mood is good, diarrhoea vanished, perception disorder has disappeared.

---

Case 14:

Name: S.O. from B., age 30, fem.  
Diagnosis: Hay fever worsening for years, allergies developing. Bioresonance: fungi in colon.  
Therapy: 8 week course of PARA-RIZOL, increasing to 10 drops up to 3 times daily in cold water  
before  
meals.  
Result: Fungi disappeared, hay fever vanished, wellbeing very good.

---

Case 15:

Name: S.H. from M., age 24, fem.  
Diagnosis: Flatulence, loss of taste, liver counts slightly increased. Alternating diarrhoea and constipation. Bioresonance: liver flukes.  
Therapy: 1 week's course of PARA-RIZOL, increasing to 8 drops up to 3 times daily in cold water  
before  
meals .  
Result: Digestion normal., taste is returning, appetite improved, excellent state of health,  
become more  
cheerful.

---

Case 16:

Name: Z.M. from S., age 35, fem.  
Diagnosis: High liver counts alternating since 1996, accompanied by pruritus when counts are high. Bilirubin increased. Bioresonance: liver flukes, candida.  
Therapy: 4 week course of PARA-RIZOL, increasing to 10 drops up to 3 times daily in cold water  
before  
meals.  
Results: Pruritus vanished, wellbeing improved.  
Bilirubin dropped from 1.17 to 0.59, norm up to 1.10.  
SGOT dropped from 40 to 10.  
SGPT dropped from 124 to 20.  
Gamma-GT remained constant at 26.

---

Case 17:

Name: S.L. from K., age 34, fem.  
Diagnosis: Vitiligo (white spot disease) for 6 months on the arms and legs, flatulence.  
Bioresonance: parasites.  
Therapy: 4 week course of PARA-RIZOL, increasing to 10 drops up to 3 times daily in cold water  
before  
meals.  
Results: The old white spots disappeared, flatulence vanished, wellbeing improved accordingly.

---

Case 18:

Name: I.S. from K., age 37, fem.  
Diagnosis: Recurrent ovarian cysts, operated on roughly twice every year. Bioresonance: Ascarides.  
Therapy: 4 week course of PARA-RIZOL since Dec. 98, increasing to 10 drops up to 3 times daily in cold

Results: water before meals .  
In May 99 no signs of new cysts.

Case 19:

Name: E.W. from S., age 60, fem.

Diagnosis: Acute hair loss in circles, accompanied by digestive problems, flatulence, abdominal pain. Bioresonance: parasites.

Therapy: 8 week course of PARA-RIZOL, increasing to 10 drops up to 3 times daily in cold water before meals .

Results: Hair loss stopped, new hairs beginning to grow. Digestive problems solved, excellent state of health.

Case 20:

Name: E.T. from K., age 64, fem.

Diagnosis: 25 kg weight loss in 3 months, aversion to meat, nausea. Bioresonance: parasites.

Therapy: 4 week course of PARA-RIZOL, increasing to 10 drops up to 3 times daily in cold water before meals .

Additional vitamin injections.

Results: 2 weeks after treatment good appetite, 2 kg weight gain, wellbeing accordingly improved.
